Blue Sea Systems' WeatherDeck™ Water Resistant Circuit Breaker Panels

Marine electrical products innovator Blue Sea Systems announces its new line of WeatherDeck™ circuit breaker panels. These water resistant panels, available in four and six circuit versions, bring a new level of performance, good looks, and versatility to boats of all sizes.

Because these panels are water resistant, rated IP67: "Temporary Immersion", they can be mounted anywhere—outside on the flybridge or open cockpit where they are easily accessible. The water resistant front panel withstands rain, sea spray, and hose spray washdown. It is constructed from UV stabilized and weather resistant material—the same material used in many automobile exterior parts.

Carling ON-OFF toggle switches and 15A push-button thermal-trip, manual-reset-only circuit breakers are installed in each circuit. Rugged UV stabilized waterproof boots protect switches and circuit breakers. Depending on your application needs, you can install switches that provide other actions, and circuit breakers of different amperages. Carling and Gaynor toggle switches are available in a variety of actions including single pole double throw, double pole double throw, and momentary styles. Circuit breakers appropriate for installation in the WeatherDeck™ panel are available in 3, 4, 5, 7, 12 and 15 amperes current ratings.

WeatherDeck™ circuit breaker panels can be mounted in four different orientations to expand location possibilities. Circuit labels can be rotated accordingly. Each panel is shipped with a set of 30 labels. Additional features include independent label backlighting circuit for remote switching and dimming, tripped circuit breaker indication, and integrated switch guards that decrease the likelihood of accidental switching.

Blue Sea Systems was founded in 1992 to create high quality marine electrical products designed to improve the safety, simplicity, and reliability of boating. Blue Sea Systems' management and engineers are active boaters that apply their passion to developing products that will enhance the experience of boaters.
