Blue Sea Systems Debuts Vessel Systems Monitor VSM 422 at IBEX 2008

Blue Sea Systems new Vessel Systems Monitor VSM 422 provides boaters with information on four critical boat systems in one compact and low cost meter. This advanced meter is a solution for monitoring the increasingly complex systems found on boats today.

The VSM 422 monitors four distinct systems with twenty-two measurements. These include: Tank levels for up to three tanks; Bilge Pump cycles / 24 hours, last cycle run %, and highest cycle run %; AC System voltage, current, and frequency; DC System current, House battery state of charge, and Battery 1, 2, 3 voltage. Programmable legends and fifteen adjustable alarm functions allow the boater to customize the VSM 422 for their specific needs.

"The new Vessel Systems Monitor VSM 422 affords today's boater access to monitoring functions previously available only to owners of large craft at high cost," said David Johnson, Senior Vice President for Sales and Marketing for Blue Sea Systems. "The VSM 422 from Blue Sea Systems offers simplicity, flexibility, and four-in-one capability for complex monitoring."

Blue Sea Systems was founded in 1992 based on a commitment to create innovative high quality marine electrical products to improve the safety, simplicity, and reliability of boating. Blue Sea Systems employees are active boaters who apply their passion to designing, developing, and building products that enhance the experience of boaters.
